                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tuberculosis antigen polypeptides (e.g. TD224) and the nucleic acids encoding them. The invention describes compounds and methods for the encoding them. The invention describes compounds and methods for the flagnosis of tuberculosis of tuberculosis of for inducing protective immunity against tuberculosis. The compounds comprise at least one immunogenic portion of one or more Mycobacterium proteins and nucleic acid molecules encoding such polypeptides. The Mycobacterium proteins and nucleic acid molecules encoding them can be used in diagnostic kits for the detection of Mycobacterium infection in patients and biological samples. The compounds of the invention and antibodies directed against the Mycobacterium infections. The nucleic acids encoding the Mycobacterium proteins may be used in vaccines for immunisation against proteins may be used in gene therapy. The present sequence represents Mycobacterium polypeptide for MO-2.

                                                                                                                                                                                                                                                                                                                                                                                                        AAQ72693 encodes AAR63567 Brevibacterium flavum feedback inhibition release aspartokinase, it was used in the construction of a plasmid. The plasmid was used to transform Corynebacterium cells, where the expression of AAQ72693 resulted in incresed L-lysine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             579 RATIEQLLTIP------LAKELAWAPDEIREEVDNNCQSILGYVVRWVDQ--

The plasmid was used to transform Corynebacterium cells, where the expression of AAQ72695 resulted in incresed Liysine production.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 929 RIVRNARKLDTVTFEEMLEMAACGAKVLMLRCVEYARRHNIPVHVRSSYSDRPGTVVVGS 988
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a modified aspartokinase from Corynebacterium glutamicum (e.g., AAB25607) and to DNA encoding the modified aspartokinase (e.g., AAAC64119). The aspartokinase of the invention is modified to remove its sensitivity to feedback inhibition by L-threonine or L-lysine. This is achieved by substituting the wild-type Thr 311 with any other amino acid; for example, in AAB29607 Thr 311 is substituted by Ile. The invention also relates to expression vectors and host coryneform bacteria containing the modified DNA, and to the preparation of L-lysine using coryneform bacteria transformed with the modified aspartokinase-encoding DNA. Culturing coryneform bacteria transformed with the modified aspartokinase DNA culturing coryneform bacteria transformed with the modified aspartokinase DNA of the invention provides efficient production of L-lysine. The present sequence represents a modified Corynebacterium glutamicum aspartokinase of the invention, T3111.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    64

The modified bacteria are is useful for producing chemical compounds including L-amino acids, vitamins, nucleosides and nucleotides. The present sequence is encoded by a lycc gene, and represents an aspartate kinase carrying the T3111 mutation. Tandem duplications of the lysc gene are used to construct the bacteria of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   809 ELDMLLTAGERISNALVAMAIESLGAHARSFIGSQAGVITIGTHGNAKIIDVTPGRLQTA 868

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:
APPLICANT: SMITH, DOUGLAS
APPLICANT: SMITH, DOUGLAS
APPLICANT: MAO, JEN-I
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
NUMBER OF SEQUENCES: 411
CORRESPONDENCE ADDRESS:
ADDRESSEE: WOLF, GREENFIELD & SACKS, P.C.
STREET: 600 ATLANTIC AVENUE
CITY: BOSTON

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 29720, Application US/09252991A

Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          989 IKDVPMEDPILIGVAHDRSEAKVTIVGLPDIPGYAAKVFRAVA------RRRRQHR 1038

Total number of hits satisfying chosen parameters:

283308 segs, 96168682 residues

Searched:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Scoring table:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Aspartate kinase (EC 2.7.2.4) alpha chain - Corynebacterium glutamicum
N.Alternate names: aspartokinase alpha chain
C.Species: Corynebacterium glutamicum
C.Species: Corynebacterium glutamicum
C.Species: To-Apr-1993 #sequence_revision 17-Apr-1993 #text_change 18-Jun-1999
C.Accession: S15276; S49977
R.Alinowski, J., Cremer. J.; Bachmann, B.; Eggeling, L.; Sahm, H.; Puehler, A.
R.A.Itle: Genetic and biochemical analysis of the aspartokinase from Corynebacterium glut
A; Reference number: S15276; MUID:92065816; PMID:1956296
A; Accession: S15276
A; Molecule type: DNA
A; Residues: 1421 < PUES
A; Accession: S15276
A; Molecule type: DNA
A; Residues: BEL:X57226; NID:g40509; PIDN:CAA40502.1; PID:g580983
A; Experimental source: ATCC 13032
R; Serebrijski, I.; Wojcik, F.; Reyes, O.; Leblon, G.
Submitted to the EMBL Data Library, November 1994
A; Description: Two loci of Corynebacterium glutamicum ATCC17965 that complement Escheric
A; Reference number: S49977
